

DIDs featured at AGG Workshop

August 2009

With the initial compilation of the Digital Integrated Dispositions (DIDs) mapping almost complete, it is appropriate that this dataset is being featured at AGG's September Workshop.

DIDs digital mapping, a product created through a partnership between the Alberta Government's Public Lands Division and Spatial Data Warehouse (SDW), is available through their distribution agency: AltaLIS Ltd.

The DIDs Project began 4 years ago to integrate over 230,000 existing dispositions (i.e. licenses, leases and permits), and maintain the data by adding new activities as they were approved. The goal: to create an integrated framework that would support an automated approval process and effective long term management of activities on Public (Crown) land.

On October 1, 2009 the build of the province will be complete and accessible in GIS and CAD formats, by transaction or subscription, through the AltaLIS Virtual Order Desk. For a detailed description and sample of DIDs, visit our webpage:
http://www.altalis.com/prod_prop_disp.html

The Alberta Geomatics Group (AGG) is hosting a **half-day workshop** on Tuesday, September 22nd at the Danish Canadian Club in Calgary. If you would like to learn more about the Government perspective and how such a detailed project was managed, there are two segments on DIDs that may interest you:

Why we DID(s) it! - Mike Michaud, Alberta Director of Surveys

The Mapping Marathon - Wendy Amy, MNC Ltd.

Click on [AGG FALL WORKSHOP](#) for more information about the event and how to register.

Hope to see you as you stop by the AltaLIS booth!
