AltaLIS Ltd.

Pricing & Licenses

"affordable & accessible data"

Background

AltaLIS is proud to announce that the first phase of a new pricing and license initiative is now completed and ready for rollout.

AltaLIS's philosophy is one of continual improvement and reengineering of our digital data products & services. Our re-engineering focus goes beyond just the product itself and into the access of it by you as a user.

New Packaging

AltaLIS introduces the concept of *'product bundles'* to base map data. Bundling of products allows us to standardize data access and sell data at lower costs while giving you an extended line of map datasets. AltaLIS product bundles include all basemap datasets & feature themes now sold individually but regrouped as:

BASE: Digital topographic data

PROPERTY: Digital property boundary data

TERRAIN: Digital 3-dimensional elevation data

New Price & License Alternatives

AltaLIS's past standard prices will remain unaffected by the new pricing. The new pricing offered recognizes the new access technologies & data uses our customers have for our data. AltaLIS pricing is designed to encourage these new data uses while recognizing the range of price sensitivities customers have.

More Information

For more information about our new licensing and pricing packages please contact AltaLIS directly or visit our website: www.altalis.com

Standard Rates

“standard pricing by the mapsheet”

AltaLIS will continue to offer its current transaction prices for topographic and cadastral basemap data sold by the township or by the NTS mapsheet.

Data Subscription

“full data access for the enterprise”

In the interests of providing our customers with more alternatives for affordable and current digital map data, new annual subscription / updates pricing and licensing is being offered to AltaLIS end-users.

Education & Research

“data access for the researcher”

In the interests of supporting research and development in the field of geomatics, AltaLIS is providing a package of their most current spatial datasets aimed at the needs of educators, researchers and software developers.

Land Surveyors

“affordable data for digital survey plan registration”

A new package is being offered in the interests of providing current and affordable property boundary data (cadastral) to Alberta Land Surveyors seeking registration of plans of survey through Alberta Registries’ “digital plan submission process”.

Municipal Subscription

“up-to-date, property maps for municipalities”

In the interest of providing municipalities access to current and affordable digital mapping. Property map data is priced at a fraction of AltaLIS standard rates and includes regular updates.

Publishers

“unlimited view-only redistribution”

AltaLIS recognizes hardcopy publishers or solution providers who wish to enhance their product lines by embedding AltaLIS datasets. This license will provide affordable access to the mapping data for view only distribution with minimal licensing and administration costs.

Value Added Service Providers

Bundled Software Solutions

“premium culture data for information services”

Software developers or solution providers, who wish to enhance their products by utilizing AltaLIS datasets, will find this package gives affordable access for their clients. AltaLIS offers your company a suite of bundled mapping products for client distribution, while keeping licensing and administrative costs at a minimum.
