

AltaLIS Adds Digital Imagery to Suite of Products

September 2012

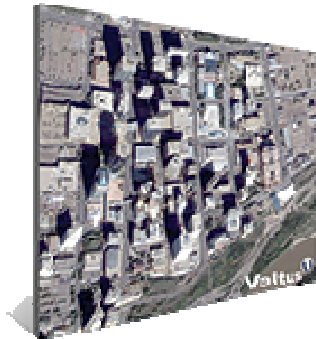

We are pleased to announce that AltaLIS has entered into a data distribution partnership with Valtus Imagery Services (Valtus).

AltaLIS customers can now capitalize on Valtus' technology which utilizes open GIS protocols to allow high-resolution ortho-imagery and elevation data to be stored, managed and viewed instantly through a wide range of industry standard web-mapping products and desktop applications.

Through this agreement, AltaLIS has the opportunity to provide a more comprehensive solution to customer needs and helps establish AltaLIS as the obvious first stop for those looking for digital mapping in Alberta.

Views: Spatial Data as a Web Service

Enjoy real-time streaming of imagery and/or LiDAR derived hillshades directly to your desktop. An ArcXML and OGC WMS imagery service, Views: Spatial Data as a Service is accessible in many applications including Esri, MapInfo, Google Earth and all proprietary oil and gas applications.

Contact the AltaLIS Order Desk for more information, and find out more about a **FREE 7 DAY TRIAL** of imagery as a Web Service!

Phone 403-716-3490 or Email: imagery@altalis.com
